

**Iron Data Selected by Lockheed Martin to Support
Major Social Security Administration Software Contract**

***Disability Case Processing System Initiative Will Create
SSA's Next Generation Claims Approval Process***

ATLANTA, January 27, 2011 – Iron Data LLC announced today it will support a vital Social Security Administration (SSA) next generation modernization program for processing disability cases as a key member of the Lockheed Martin Disability Case Processing System (DCPS) program.

An indefinite delivery indefinite quantity contract, the DCPS agreement carries a 1-year base period with five 1-year options. It is valued at \$200 million if all options are exercised during the 6-year contract period.

This new system will support the SSA's disability workload. The system will be operational in the 54 states and federal disability determination case processing sites located throughout the United States and its territories.

“This latest contract with the Social Security Administration reinforces Iron Data's leadership in supporting government efforts to make government services more efficient,” said Chris Reed, President of Iron Data.

Terry Ross, Iron Data's Vice President of Benefits Case Management, said, “Iron Data has had a long and trusted relationship with the Social Security Administration in providing systems and support for disability determination. We look forward to teaming with Lockheed Martin to deliver a next generation solution that will serve the Social Security Administration for many years to come.”

Iron Data is headquartered in Atlanta, Georgia with eleven offices worldwide and over 300 employees. Iron Data offers a comprehensive suite of solutions, called Intelligent Process Management, that assess, improve, manage and monitor challenging operational process issues for clients in two key verticals: public sector and transportation/logistics.
